FEATURES

"The system helps improve hotel efficiency by organizing booking information, room availability, and guest details in a centralized database."

- **Role-Based Access Control:** Secure dashboards for **Administrators and Customers**, allowing admins to manage rooms, bookings, and payments while customers can reserve rooms and view their bookings.
- **Room Availability Management:** Real-time monitoring of room status (Available, Reserved, Occupied) to prevent double bookings and ensure accurate reservations.
- **Reservation Processing:** Guests can book rooms by selecting room number, bed type, and reservation dates while the system automatically records booking details in the database.
- **Dynamic Session Management:** Logged-in user information such as **User ID, Name, and Account Type** is stored during the session to personalize the system interface.
- **Automated Payment Recording:** The system records and stores payment details linked to reservations, helping administrators track completed and pending payments.
- **Customer Profile Management:** Users can view and update their personal information including name, contact details, and account credentials.
- **Reservation Monitoring:** Administrators can easily view, update, or cancel reservations through a centralized reservation management table.

- ## STAKEHOLDERS

Users:

- **Admin** – manages rooms, customer check-ins, and system data.

Stakeholders:

- Hotel owner/management
- Hotel staff
- Customers/guests who use hotel services

USER MANUAL

1. Landing Page / Registration

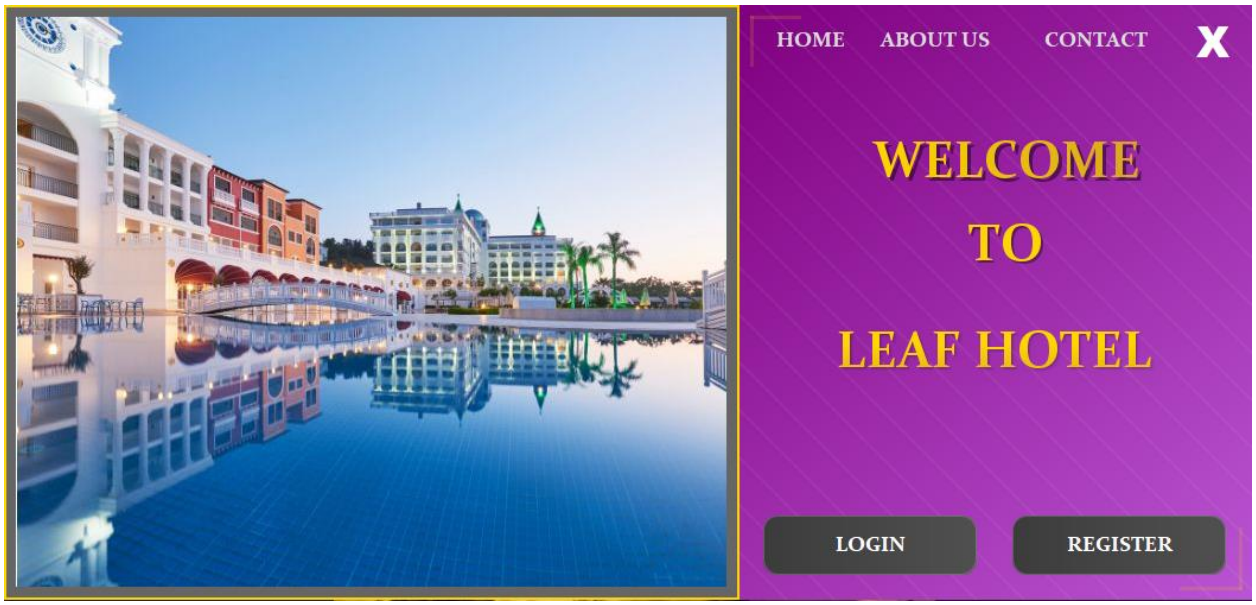
Before accessing the system, a user must first create an account in the system. The account will be stored in the database with an **Inactive status** and a specific **User Type** (Admin or Customer) It will be **Active** when you change the **Inactive status** in the Database.

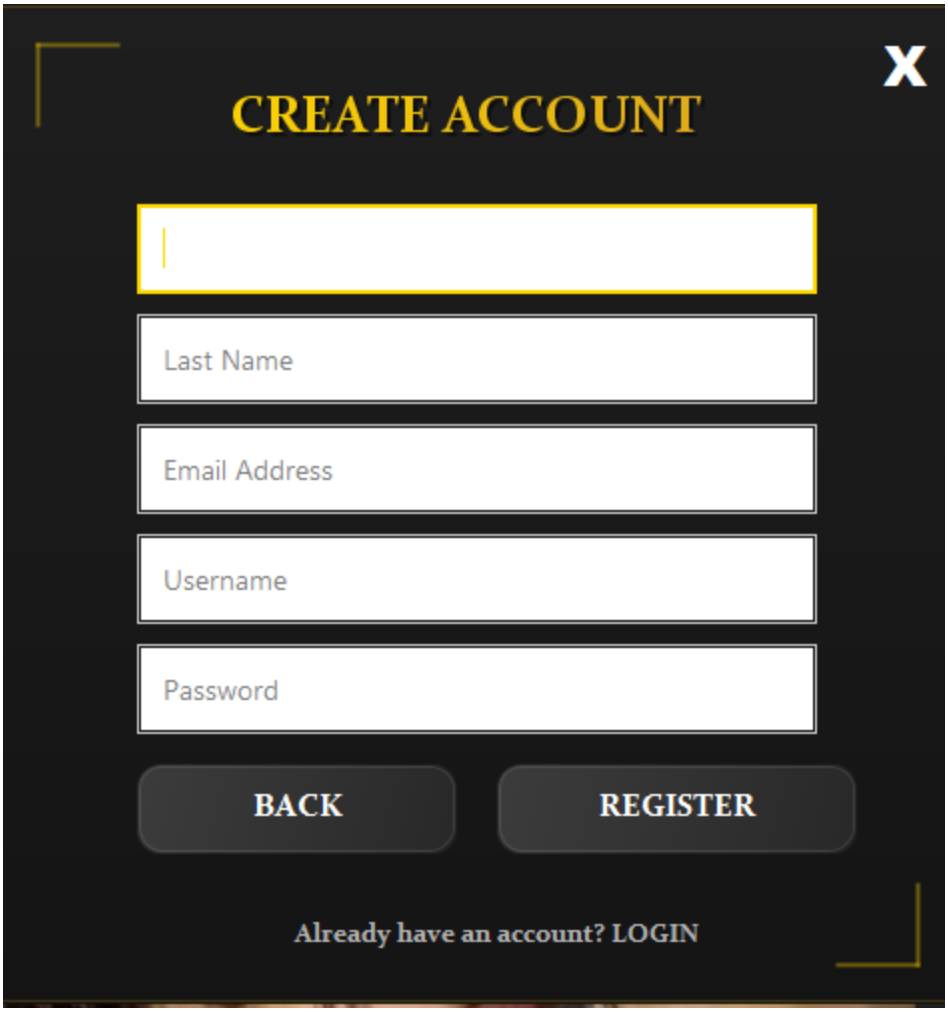
Step 1: Open the Application

Launch the **Hotel Management System application**. The **Landing Page** will appear showing the hotel welcome screen with navigation options such as **Home**, **About Us**, and **Contact**.

Step 2: Click the Register Button

On the landing page, click the **"Register"** button located at the bottom of the welcome panel to create a new account.





Step 3: Enter User Information

Fill in the required registration details in the registration form:

- **First Name**
- **Last Name**
- **Email Address**
- **Username**
- **Password**

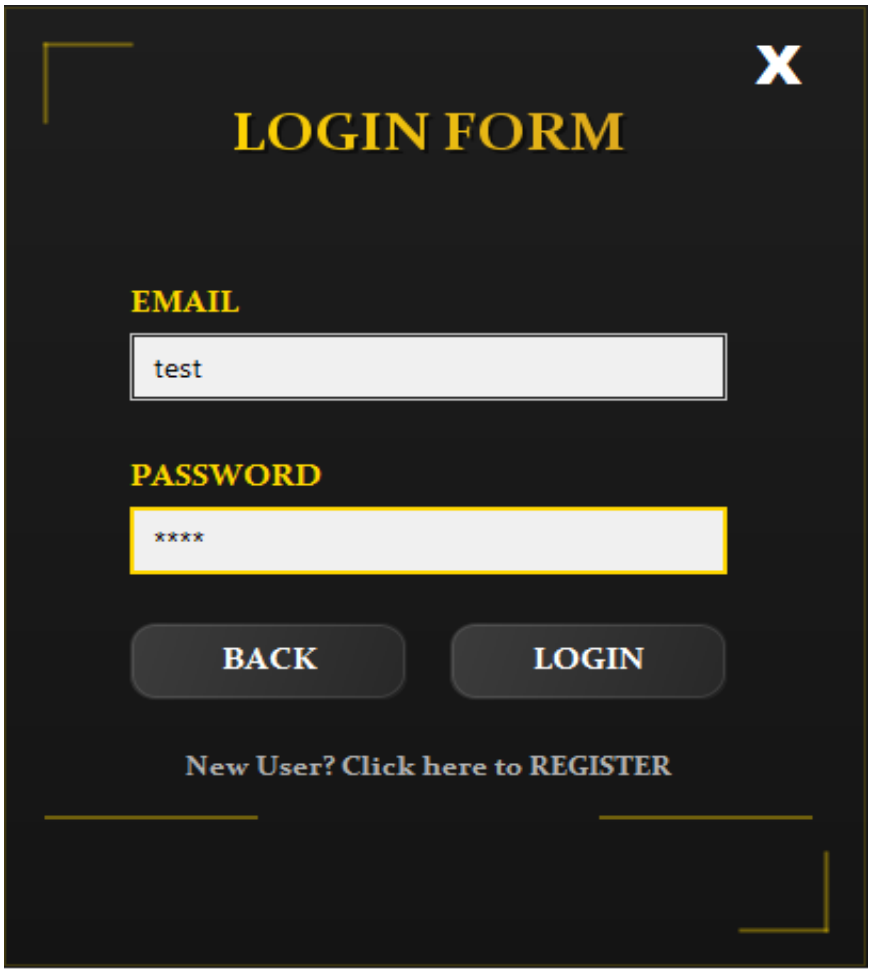
Step 4: Submit Registration

After entering all the required information, click the **Register/Submit** button to save your account in the system database **(Like This)**.

	id	first_name	last_name	email	password	type	status	idpicture	username
1	1	leif	villaraza	leif@gmail.com	2006	ADMIN	ACTIVE	NULL	leif
2	2	test	test	test	test	USER	ACTIVE	◆PNG...	user_2
3	3	ets	qwe	tester	123	USER	ACTIVE	NULL	user_3
4	4	qwe	qwe	qwe	qwe	ADMIN	ACTIVE	NULL	user_4
5	10	test	test	test@gmail.com	qweqwe	USER	INACTIVE	NULL	test
6	11	testt	ttestt	ewq	qweqwe	USER	ACTIVE	NULL	ewq
7	12	ewq	ewq	ewq	ewq	ADMIN	ACTIVE	NULL	NULL

Step 5: Login to the System

Once registration is successful, return to the **Login page**, enter your **Email and Password**, and click the **Login** button to access the system.



Result

After logging in successfully, the user will be redirected to the system dashboard where they can access hotel services such as **home, user profile, booking, manage booking, logout.**

2. User Dashboard

After successfully logging in, the user will be directed to the **User Dashboard**. This page serves as the main control panel where users can access different features of the **Hotel Management System** such as profile management, room booking, and reservation monitoring.

Dashboard Menu Options

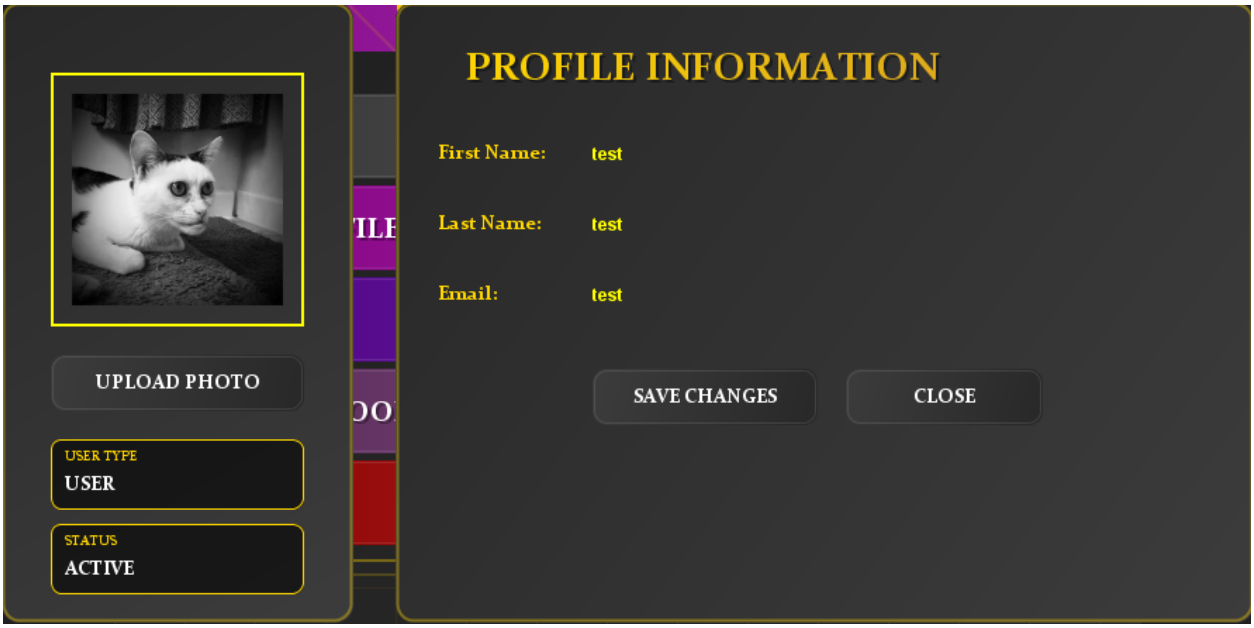
The dashboard contains a **navigation menu on the left side** with the following options:

Home

Displays the main dashboard page and system welcome interface. A welcome notification will appear confirming that the user has successfully logged in.

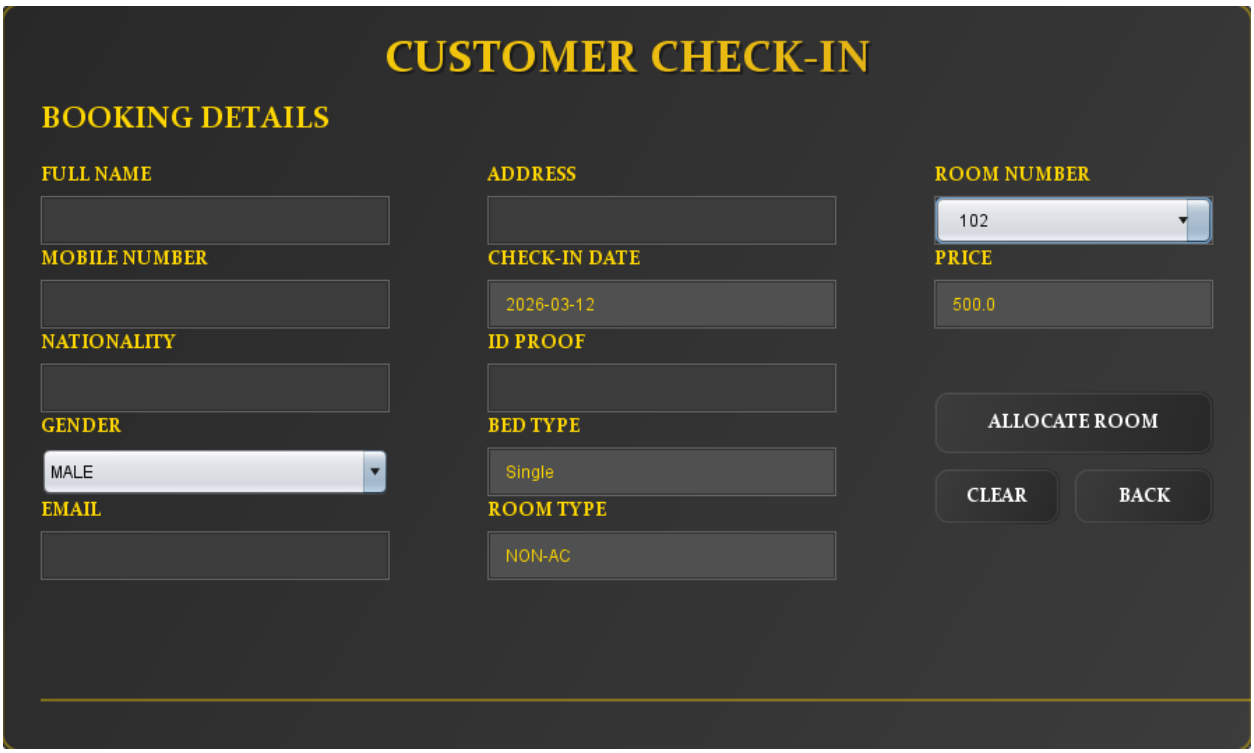
User Profile

Allows the user to view their personal information such **as First name, Last Name, Email.** It also enables the user to upload a profile photo and save changes to keep their account information updated.



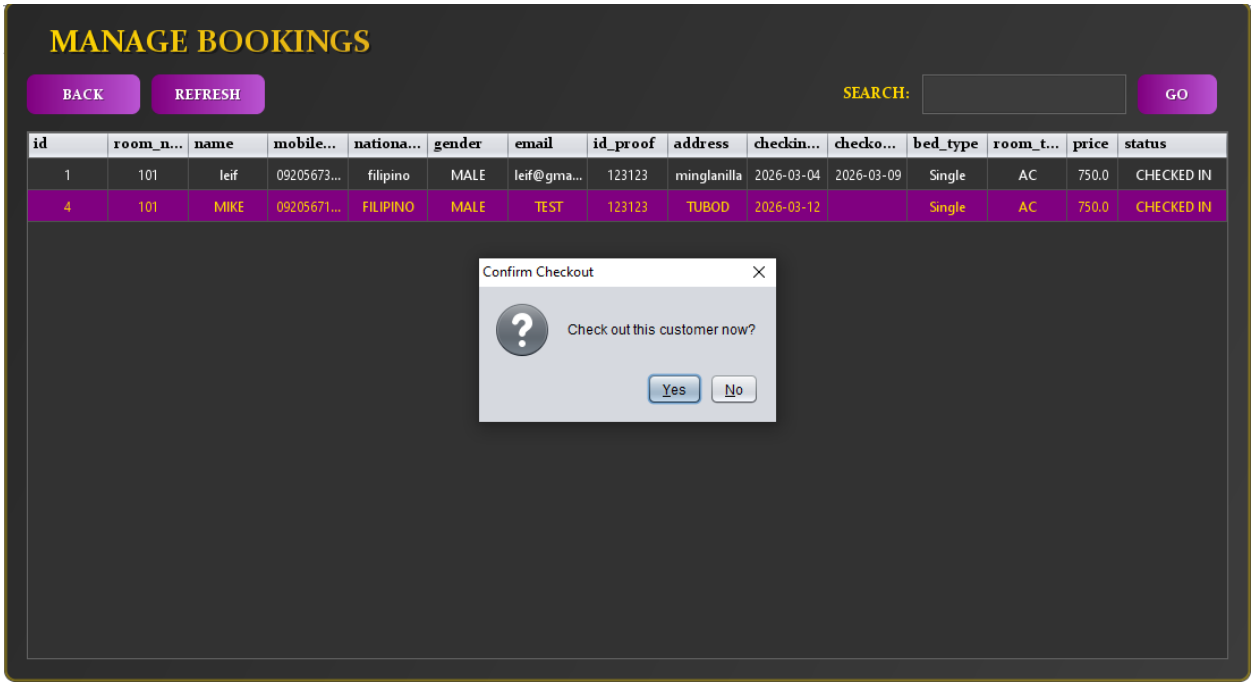
Booking

This section allows the user to make a **room reservation** by selecting or filling the fields such the **available rooms, reservation dates, and other booking details.**



Manage Bookings

This section allows users to view and manage room bookings. It displays booking details including guest information, room number, check-in and check-out dates, bed type, room type, price, and status. Users can search for specific bookings, refresh the list, and confirm the checkout of checked-in customers.



Logout

Ends the current session and securely logs the user out of the system, returning them to the **Login Page**.

3. **For Administrators**

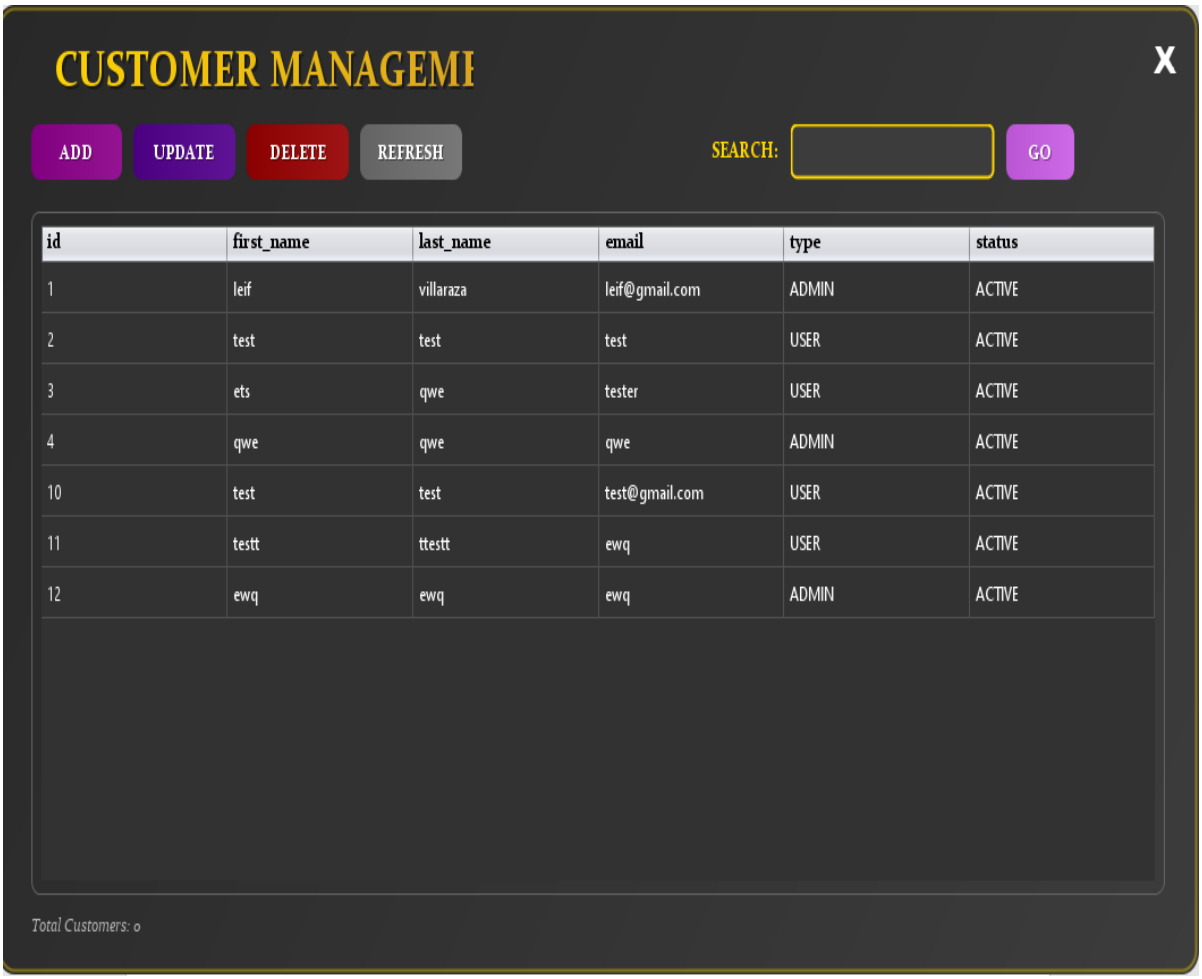
Secure Login: Enter Admin credentials; the system verifies your "Type" in tbl_users and redirects you to the Admin Dashboard.

➢ Users

Customer Management

This section allows the administrator to manage system users. The admin can **add new customers, update existing user information, and delete user records** when necessary. The table displays important user details such as **ID, first name, last name, email, user type, and status**.

Administrators can also **search for specific users and refresh the list** to view updated customer records.

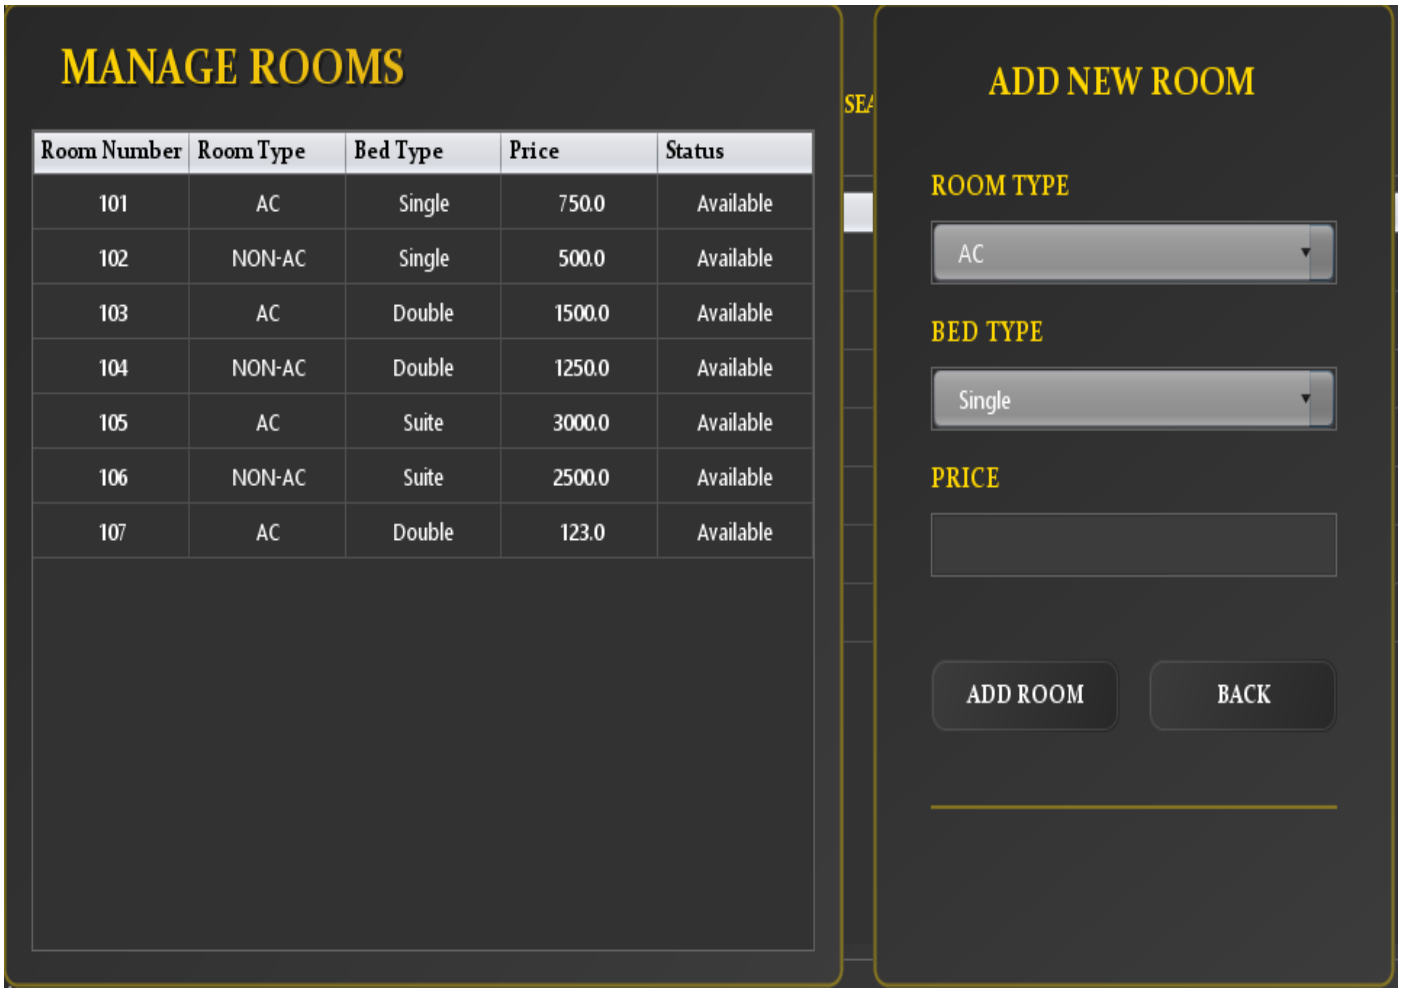


id	first_name	last_name	email	type	status
1	leif	villaraza	leif@gmail.com	ADMIN	ACTIVE
2	test	test	test	USER	ACTIVE
3	ets	qwe	tester	USER	ACTIVE
4	qwe	qwe	qwe	ADMIN	ACTIVE
10	test	test	test@gmail.com	USER	ACTIVE
11	testt	ttestt	ewq	USER	ACTIVE
12	ewq	ewq	ewq	ADMIN	ACTIVE

➢ MANAGE ROOMS

This section allows the administrator to manage the rooms available in the system. The admin can **add new rooms and set their corresponding room type, bed type, and price**. The table displays room details including **room number, room type, bed type, price, and availability status**.

These room records are used during the **check-in process**, where users can select from the available rooms in the system.



- **Customer Billing**

This section allows the administrator to view and manage the billing records of customers who have completed their stay in the hotel. The system automatically records customer details during the check-in and checkout process.

The table displays important billing information including the customer ID, room number, name, mobile number, nationality, gender, email, check-in date, checkout date, bed type, room type, price, and booking status.

The administrator can search billing records by entering the customer's checkout date in the search field. This helps staff quickly locate transactions for a specific day.

Additionally, the administrator can double-click any row in the table to generate and print the customer's receipt, which contains the complete billing details of the customer's stay. The receipt will be generated in **PDF format**, allowing it to be printed and automatically saved to the system's file storage for future reference.

This section helps the hotel staff easily track completed bookings, manage billing records, and provide receipts to customers when needed.
